

Milbrotec® Centre Pivot Fencing System

Less time fencing. Less work in the paddock. More flexibility around your centre pivot.

Managing livestock around an operating centre pivot can mean repeatedly putting up and pulling down temporary fencing — often requiring at least four trips to get the job done: *Posts. Wire. Run the fence. Return to tension.*

That means more labour, more time in the paddock and greater exposure to heat, manual handling and reptiles/snakes.

The **Milbrotec® Centre Pivot Fencing System** is designed to provide a simpler way to segment pasture around an operating centre pivot irrigator and is designed for one-person deployment. The innovative Milbrotec® Centre Pivot Fencing System's frame can be retrofitted to your existing center pivot, where each dropper can be quick-released and connected for repositioning... *letting the frame do the heavy lifting.*

WHY FARMERS ARE INTERESTED

- ✓ Reduce labour
- ✓ Improve Safety
- ✓ Manage Pasture More Flexibly
- ✓ Keep Your Land Workable
- ✓ Built For Australian Farm Conditions
- ✓ Works With Your Existing Irrigator

For Broadacre Farmers

If temporary fencing around your pivot is costing labour, time and flexibility, the Milbrotec® Centre Pivot Fencing System is designed to give you another option.

For Irrigation Companies

The Milbrotec® Centre Pivot Fencing System is designed as a complementary solution for centre pivot customers — providing an opportunity to add practical livestock and pasture-management capability alongside existing irrigation systems.
